1. Q: How can I improve the Wi-Fi performance of my M8 system?

    A: Please kindly follow the steps below.

       Step1. Update the BIOS version.

           Z97-M8 P1.40 or later versions

           Link: http://www.asrock.com/nettop/Intel/M8%20Series%20(Z97)/?cat=Beta

           Z87-M8 P1.70 or later versions

           Link: http://www.asrock.com.tw/nettop/Intel/M8%20Series/?cat=Download&os=BIOS

       Step 2. Un-install Intel® Smart Connect Technology driver from your system.

2. Q: My monitor and DisplayPort cable supports DP1.2. However, the AMD VGA driver still shows "A display capable of DisplayPort v1.2 data rates and multi-streaming is currently connected to a connector that does not support DisplayPort v1.2" on AMD FM2+ platform. How to fix this issue?

    A: Please download and install AMD VGA driver v14.9 to solve this issue.
