

## ***Technical Reference - Q&A***

### **1. Q: When I create a RAID volume over 2TB capacity, the RAID volume cannot be recognized after installing the RAID driver during XP installation. Why?**

**A:** Due to the operating system limitation, Windows XP only supports MBR disk format, the MBR disk format cannot support the hard drive capacity over 2TB.

If you want to use over 2TB RAID volume to be your boot disk, below three conditions must be required:

1. Your operating system must be Windows Vista x86 SP1 or Vista x64 SP1.
2. EFI BIOS.
3. GPT disk format.

Please refer to following link to get more information.

### **2. Q: I install ATI 2xxx, 3xxx, 4xxx series PCIE VGA card on the motherboard. After installing all windows XP drivers from the motherboard, it still shows an unknown "audio device on the high definition audio bus." message under device manager. What could I try?**

**A:** There is an integrated audio chip in the ATI 2xxx, 3xxx, 4xxxx series graphics cards.

Please install ATI HDMI audio driver.
